## TOP Wavelengths DFB: 1854 nm & 1877 nm

nanoplus Distributed Feedback Lasers **(DFB)** are specifically designed for high-precision gas detection using tunable diode laser absorption spectroscopy **(TDLAS)**. Our devices operate **reliably** in more than 50,000 installations worldwide. For 25 years nanoplus has set the standard for DFB laser technology and is the only manufacturer routinely providing DFB lasers at **any wavelength**.

# Key features:

- MONOMODE
  CONTINUOUS WAVE
- ROOM TEMPERATURE
- MODE HOP FREE TUNING

Overgrowth-free DFB device processing

Any **custom wavelength** is possible: You tell us what you need and we deliver it. With our patented DFB technology we design any wavelength **between 760 nm and 14 μm.** 

Our excellent **spectral purity** is characterized by a large side mode suppression ratio **(SMSR)** of **> 35 dB**, giving your system a low signal to noise ratio against crossinterference.

A **narrow linewidth below 3 MHz** guarantees ultra-precise scanning of the absorption line feature. The **high output power** of **several mW** yields a stronger signal and increases your measurement precision.

#### Fast and wide wavelength

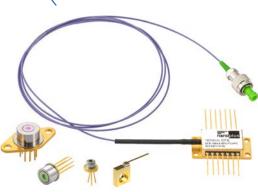

**tuning** is required for in situ systems. Most customers use a scan rate of 10 kHz and benefit from our very **large tuning coefficient.** 

#### "Do not change your ideas, let us deliver the laser that fits your application."

We offer **various packaging options**, e.g. several free space housings including TEC and NTC, fiber coupling, **collimation** and **custom designs**. What do you require?

If you require **custom specifications**, please contact us. Nearly 80 % of our devices are more or less customer-specific. As nanoplus is a **fully vertically integrated company**, we control the entire process chain from design to packaging. Both nanoplus production facilities are based in **Germany**. To guarantee consistent product quality we apply a strict and **ISO certified quality management system** at all levels.

Our sales and R&D teams have long-standing experience in developing lasers. They will advise you in your design and realization phase as well as after-sales: **We make market leaders!**

## Superior Specifications: 1854 nm & 1877 nm

This data sheet reports performance data of a **sample nanoplus DFB laser at 1877 nm with enhanced specifications.** They are equally valid for 1854 nm.

Standard specifications are available at: <u>nanoplus.com/DFB/1850nm-2200nm</u>. These lasers are particularly suitable for water vapour ( $H_2O$ ) detection.

Typical room temperature cw spectrum of a nanoplus DFB laser at 1877 nm

electro-optical characteristics	symbol	unit	min.	typical	max.
operating wavelength (at $T_{_{\mathrm{op}'}}$ $I_{_{\mathrm{op}}}$ )	$\lambda_{_{op}}$	nm		1877	
optical output power (at $\lambda_{_{op}}$ )	P <sub>op</sub>	mW		5	
operating current	I <sub>op</sub>	mA		100	
operating voltage	V <sub>op</sub>	V		2	
threshold current	l <sub>th</sub>	mA	8	18	32
side mode suppression ratio	SMSR	dB		> 35	
current tuning coefficient	C,	nm / mA	0.017	0.025	0.035
temperature tuning coefficient	CT	nm / K	0.17	0.19	0.21
operating chip temperature	T <sub>op</sub>	°C	+20	+25	+45
operating case temperature*	T <sub>c</sub>	°C	-20	+25	+55
storage temperature*	Τ <sub>s</sub>	°C	-40	+20	+80

### packaging

TO5 with TEC and NTC, black cap, AR coated window TO56 without TEC or NTC, sealed, window c-mount without TEC or NTC butterfly package with TEC and NTC, SM or PM fiber, FC/APC connector chip on carrier without TEC, with NTC

Technical drawings & accessories are available at: nanoplus.com/packaging
